EDUCATION

Santa Clara University — Santa Clara, CA

June 2026

B.S. Computer Science and Engineering

Relevant Coursework: Software Engineering, Operating Systems, Artificial Intelligence, Theory of Algorithms, Computer Networks, Embedded Systems

PROJECTS

Automatic Radio Recording Distribution System

Python, AWS EC2, AWS S3

github.com/colinfriedel/KSCU-Show-Recorder

- Built a continuously running Python service on AWS EC2 that auto-records hourly radio output and emails each recording directly to the on-air DJ in a downloadable format
- Architected cloud storage pipeline using AWS S3; runs unattended 24/7 with zero manual intervention

Reef Monitoring Communication System

Cellular/Acoustic/Serial Communication

github.com/colinfriedel/IRIS-Senior-Design

- Led the software and data pipeline for an underwater reef sensor system in the Palos Verdes Reef, coordinating cellular, acoustic, and serial communication protocols across the full sensor-to-cloud path
- Wired and programmed an RS-485 interface to pull data from the underwater sensor network into a Feather Adalogger M0 for local buffering
- Converted the signal to RS-232 to drive a Succorfish Delphis acoustic modem, transmitting it through the water column to a second acoustic modem and back through an identical RS-232/RS-485/Feather Adalogger M0 chain
- Programmed a Particle Boron 4G LTE module (404X) to publish the received data to the cloud, feeding a Google Sheet embedded in a public Google Site for live monitoring

WORK EXPERIENCE

General Manager - KSCU 103.3 FM Radio Station | Santa Clara, CA

June 2025-June 2026

- Managed a team of 16 hired student staff across programming, production, and station operations
- Oversaw 130+ active DJs and off-campus volunteers to sustain a 24/7 live broadcast
- Planned and executed multiple live music events per quarter, coordinating artists, venues, and logistics end-to-end
- Was solely responsible for staff hiring, station strategy, and day-to-day operations

Software Development Intern - NationsBenefits, LLC | Plantation, FL

June-August 2023

- Developed and optimized C# programs to parse and reformat healthcare data files received from external partners, improving processing efficiency
- Operated in an Agile/Scrum environment; presented technical progress and findings to the software development team

SKILLS

Languages: Python, JavaScript, HTML, CSS, C#, C++, SQL

Tools & Platforms: AWS, React, Git/GitHub, VS Code, Azure DevOps, Jira

Concepts: Full-stack development, REST APIs, Agile/Scrum, cloud infrastructure, embedded systems
